Algorithm 1 Model Based Reflex Agent

```
1: function MODEL-BASED-REFLEX-AGENT(percept)
2:
       persistent:
          state, the agent's current conception of the world state
 3:
          model, a description of how the next state depends on current state and action
4:
          rules, a set of condition-action rules
5:
          action, the most recent action, initially none
6:
7:
       state \leftarrow \text{UPDATE-STATE}(state, action, percept, model)
8:
       rule \leftarrow \text{RULE-MATCH}(state, rules)
9:
       action \leftarrow rule. ACTION
10:
       return action
11:
```
